Challenge

Our approach

1 Stochastic evolution

baseline

growth

response

treatment effect

one baseline, several possible futures

2 Scarce, inconsistent data

misalignment

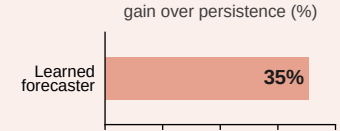

scanner / protocol

A A B C

irregular visits

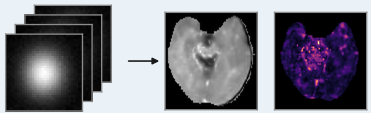

small cohorts; miscalibration risk

3 Overstated skill

judged only against “no change”

Generative ensemble

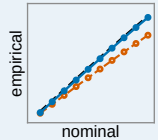

R members

forecast

uncertainty

conditional flow matching

Calibration, tested for transfer

finite-ensemble ideal

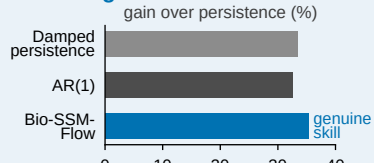

raw ensemble

calibrated

transfer tested on two external cohorts

one cross-fitted temperature

Forecast-grade evaluation

statistical references; external test
